

PREPARE FOR THE RUSH AFTER THE DROUGHT

There will be a flurry of activity when the drought breaks.

Farmers always want fertilizer at the same time to take advantage of the favourable conditions and recoup some lost revenue.

Oz Spread can help contractors prepare in many ways.

While spreaders are idle, arrange to have it fully serviced and replace worn parts so break downs are minimised.

Upgrade existing bins to improve spreader performance. Visit our options link or contact us for further information.

If you need a new truck now is the time to buy and have the spreader bin fitted and spread tested.

Consider having your bin spreader system modified and spread tested. The spinner and spray bars constructed by Oz Spread have already been proven to spread thirty two (32) meters under the line.

Cash flow is critical to any business and we offer some flexibility in construction and fit out of bins to assist. We will quote to construct the bin only without hydraulic pump, motors, computer or other fit out items and hold it in our factory until you want it completed. This will allow you to purchase a bin in two separate instalments and ease cash flow pressure.

Don't be caught at the back of the queue when the drought breaks.....get ready now.
